

Superhuman Invigilation

The New Virtual
Assessment Platform

Solve the Test Integrity Puzzle

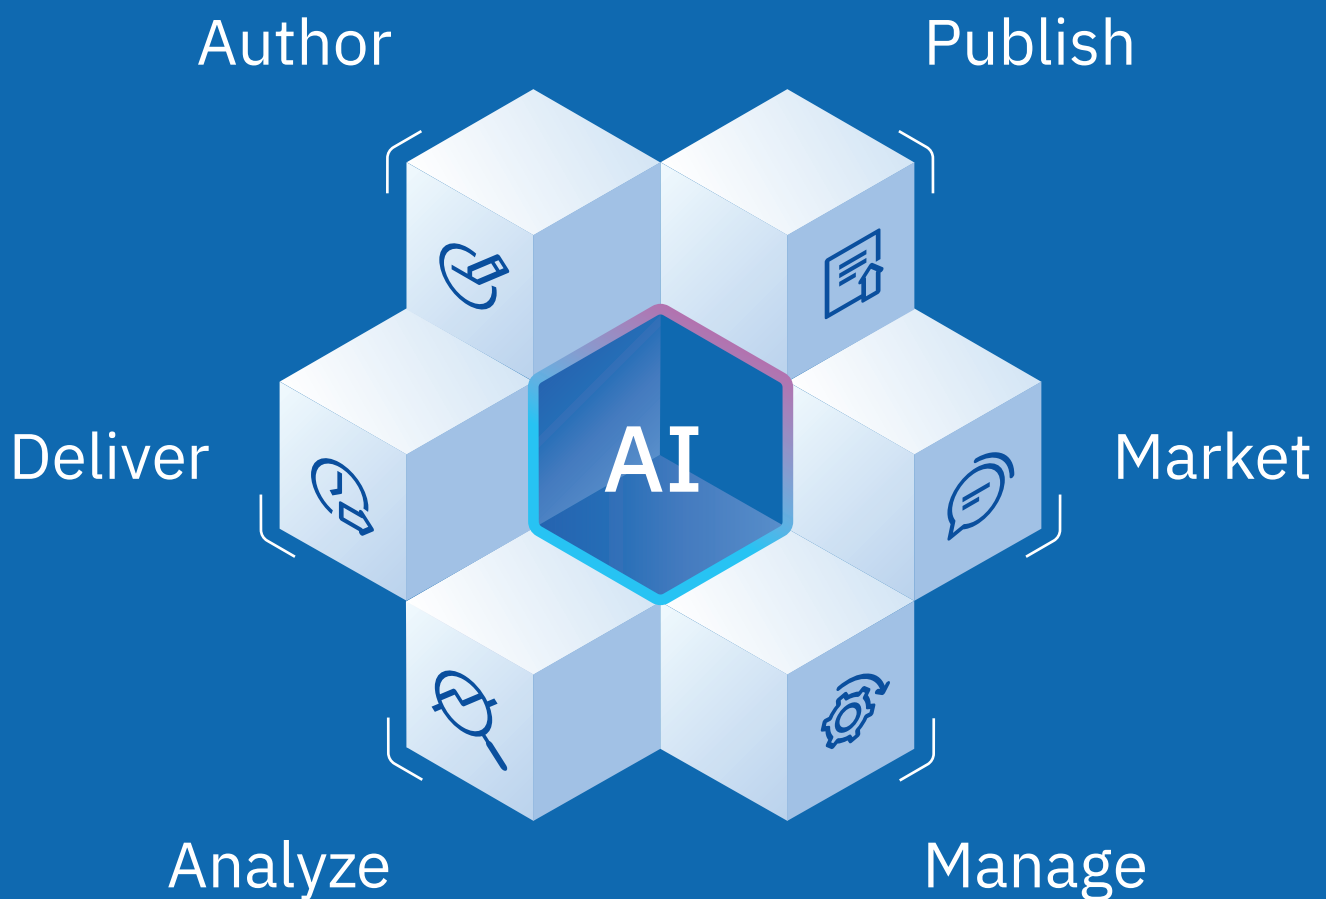

Virtual Exams Are the Future. The Future is Now.

If you run a training and certification organization, you know that assessment is the hardest part. You can train hundreds of thousands of people efficiently with technology. But the way you test them is stuck in the past. The old way with centers and proctors with arcane technology? That just doesn't cut it anymore.

Your candidates are normal human beings. They live and work at the speed of the internet and they expect everything to be fast, easy and convenient. Ask them to travel to a test center for an exam? They're likely to take a hard pass. It's time to rethink your assessment strategy. It's time to engage candidates on their terms and their home turf. It's time to whole-heartedly embrace virtual exams.

Rosalyn solves the technology puzzle for your certification program.

Our end-to-end platform offers everything you need to grow your certification program. Whether scaling up a current program, migrating from offline or somewhere in-between, Rosalyn provides secure automation to support you.

Superhuman Proctoring for Virtual Exams.

Candidates take their exams at their own home or office on their computer whenever it's convenient. An autonomous artificial intelligence invigilates the exam remotely. This human/AI collaboration makes testing very secure, consistent and effective.

How it works:

A candidate logs in to Rosalyn or your custom portal.

1

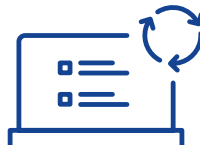

The candidate then downloads a small app to host the test session.

2

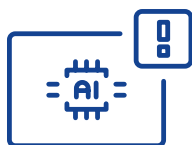

The system verifies the candidate's identity

3

The candidate takes the test with remote AI invigilation. The system continuously verifies that the person taking the test matches the ID.

4

When the AI detects patterns in the datastreams that point to a violation, it politely prompts the candidate to cease that behavior.

5

Serious violations are escalated to a human proctor for real-time arbitration.

6

A quantum leap in efficiency allows unlimited scaling of your assessment and certification program

The Human-In-The-Loop AI invigilator deters and detects cheating better than any human can. This superhuman invigilator can spot subtle cheating cues that are invisible to human proctors, across thousands of simultaneous test sessions in real-time. Working with AI, a single human arbiter can handle the workload of twenty test center proctors. You have lower costs, more consistent invigilation, increased content protection, and vastly increased capacity. All with world-class data security and privacy compliance.

The Rosalyn Difference

- Unlimited scale
- Global reach
- World-class data security and privacy
- Costs 50% less
- Works with leading LMS systems

The Rosalyn AI:

- Monitors multiple multiplexed data streams
- Candidate behavior
- Test environment Audio
- Test interactions
- Profile data
- Trained on hundreds of thousands of testing sessions
- Constantly improving. Every testing session improves the machine learning model.

The Rosalyn Virtual Assessment Platform Solves The Rest of the Puzzle

With virtual exams you have remote AI invigilation, you don't need test centers - or the logistic to support them. All the pieces of Rosalyn's new assessment platform fit together to give you a complete view and unprecedented control over your certification program. The Rosalyn platform streamlines and simplifies the certification lifecycle and allows you to capture data about its every aspect. Now, you can get a clear and complete view of your interactions with your candidates and partners.

Question Authoring

Fully featured authoring environment.

- 60+ question types
- Item banking
- Import and export items from standards-compliant LMSs

Assessment Publishing

Powerful tools give you unparalleled flexibility and control in creating assessments.

- Clone, rename and edit whole forms
- Cut and paste between forms
- Language and localization

Delivery

In addition to the native test delivery platform, or integrate with leading LMS and test delivery engines. Customize the candidate experience to your needs.

- Time limits
- Browser security
- Disability accommodations

Invigilation

Tailor the level of AI/human invigilation to the location and stakes of the exam. You can have unmonitored exams for your proctored conference events and rigorous AI invigilation for your high value remote assessments.

- Configurable ID verification and invigilation rules for the AI
- Queue, assign and manage human arbiters
- Detailed data for session-level security and compliance

Certification Management & Marketing

Market your certifications and assessments with powerful merchandising features. Package and price your catalog for eCommerce success.

- Custom certificate design
- Vouchers, discounts, localized pricing & currency
- Candidate Portal: Registration, profile, history, assessments

CRM (Candidate Relationship Management)

Manage candidate profiles, affiliations, partners, test history, transaction history, scores, certifications. Drill down to individual candidates and take action.

- Partners
- Candidate affiliation
- De-duplication and merge

Reporting & Analytics

See the big picture and the little picture at once. Surface the insights that drive your business forward. Multi-dimensional reporting and metrics are at your fingertips. Bottom-line ROI and performance data have never been so accessible. Custom reporting across all Rosalyn functions: Authoring, Delivery, Invigilation, Proctoring, Financial, Geographic,

Affiliation, Partners and System.

- Conditional filtering and custom date ranges.
- Certification life-cycle analytics
- Item, Question, Assessment and Session level psychometrics.
- Drill-down through summaries to individual candidate history
- Custom and Ad hoc reports of every available dimension and metric

APIs & Integrations

Rosalyn's Virtual Assessment Platform is designed from the ground up to integrate with your organization's information infrastructure.

- Share your program data with LMS, ERP, CMS, Salesforce, survey, and eCommerce platforms.
- Extend test delivery to other authoring environments. and test engines.
- Platform support for performative environments and human graded exams.
